Gen Art Recreation Paragraph

For this homework assignment, I have chosen to recreate a classic art piece created by Vera Molnár, who was a Hungarian media artist widely considered to be a pioneer in generative computer art. After examining this artist in class, I became fascinated by her artwork and decided to choose one of her art pieces to recreate. Specifically, I found her work very interesting and particularly admire her ability to balance order and randomness to create visually complex compositions. Thus in my recreation in TouchDesigner, I aimed to create an art piece that captures layered, overlapping quadrilaterals while utilizing a randomized yet structured placement of colors and shapes. Furthermore, I was able to add my own spin on Molnár's work by creating a modified version of her work that incorporates the random movement of shapes. I was able to accomplish this by using the *absTime.seconds*.1* expression within the noise1 CHOP.

Work Being Recreated
